

Ampliflow™ G-Boost

Seal gas booster

The Ampliflow G-Boost delivers a continuous supply of clean seal gas to compressor gas seals, eliminating a source of contamination and equipment downtime. Driven by an electric motor, the Ampliflow G-Boost improves operational reliability during periods of low differential pressure across the compressor when the available seal gas supply is insufficient.

Features and Benefits

- Positive displacement scroll compressor technology produces consistent gas flow rates over a broad range of operating conditions.
- Hermetically sealed, magnetically driven design eliminates leakage of process gas to the environment.
- Modular design can be fitted into existing support systems and allows for quick and simplified local maintenance.

Materials of Construction

Magnetic Coupling	Titanium
Housing	Stainless steel
Dimensions	996 x 385 x 410 mm (39.20 x 15.16 x 16.20 inches)

Design Specifications

Standard Area Classification	NEC Class 1, Div. 2, Group BCD
Electric Motor	7.5 hp 3/60/208-230/460V 1800 rpm Variable Frequency Driven
Maximum Allowable Discharge Pressure	114 bar (1650 psi)
End Connections	O-Ring flange adapter to custom end configurations (Tube connection standard)

Seal gas supply flow rate

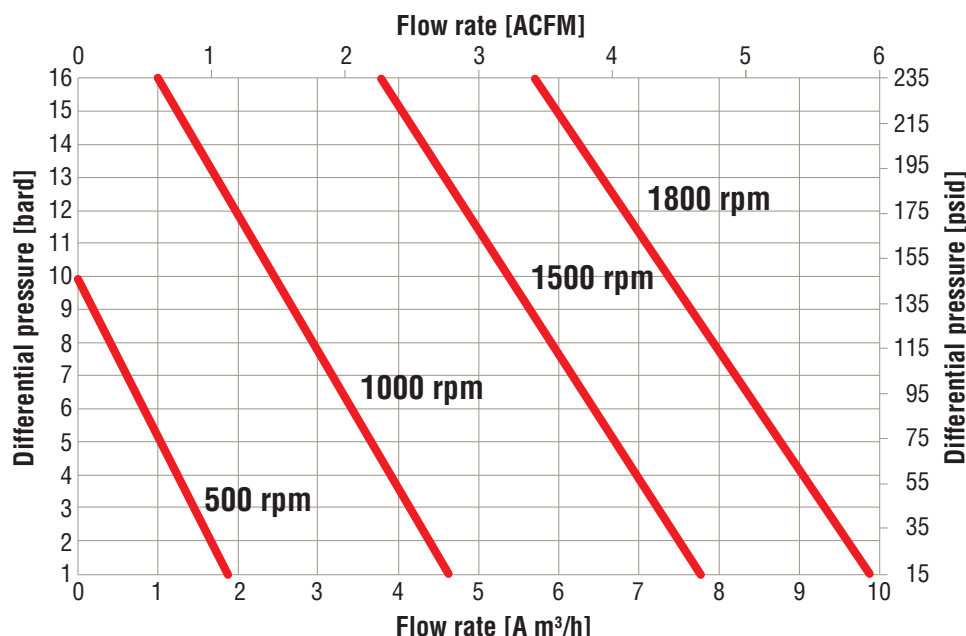

This graph illustrates the seal supply gas flow with and without the use of Ampliflow G-Boost. During the startup phases of a gas compressor, the Ampliflow G-Boost delivers sufficient seal gas flow rate to protect dry gas seals from process contamination.

Ampliflow G-Boost flow and differential pressure

Performance curves for a typical gas transmission pipeline service at **50 barg (725 psig) inlet pressure** demonstrate compelling flow rate and differential pressure capability over various speeds.

Contact Flowserve for Ampliflow G-Boost performance curves specific to your application.

Flowserve Corporation has established industry leadership in the design and manufacture of its products. When properly selected, this Flowserve product is designed to perform its intended function safely during its useful life. However, the purchaser or user of Flowserve products should be aware that Flowserve products might be used in numerous applications under a wide variety of industrial service conditions. Although Flowserve can provide general guidelines, it cannot provide specific data and warnings for all possible applications. The purchaser/user must therefore assume the ultimate responsibility for the proper sizing and selection, installation, operation, and maintenance of Flowserve products. The purchaser/user should read and understand the Installation Instructions included with the product, and train its employees and contractors in the safe use of Flowserve products in connection with the specific application.

While the information and specifications contained in this literature are believed to be accurate, they are supplied for informative purposes only and should not be considered certified or as a guarantee of satisfactory results by reliance thereon. Nothing contained herein is to be construed as a warranty or guarantee, express or implied, regarding any matter with respect to this product. Because Flowserve is continually improving and upgrading its product design, the specifications, dimensions and information contained herein are subject to change without notice. Should any question arise concerning these provisions, the purchaser/user should contact Flowserve Corporation at any one of its worldwide operations or offices.
